This is the official version of the Royal Flush software. In order to run the program, please execute the ‘pkaces_server’ and ‘pkaces_client’ executables. Run ‘pkaces_client’ from the command line with the arguments <hostname> and <hostport> (ex. <crystalcove.eecs.uci.edu> for the hostname and <10190> for the hostport). There are no further instructions to install the program, however for more details, please refer to the user manual.

Example execution:

```
./bin/pkaces_server  
./bin/pkaces_client crystalcove.eecs.uci.edu 10190
```

Further explanation:

The server executable will print out what port is currently open once it is run. The port printed is what the user will enter in the port argument when running the program from the command line. The port is different for every user.
